\* State income tax liability includes revenue from residents and non-residents, whereas federal tax liability includes payments by residents only. The effect of this discrepancy is to slightly raise the percentages reported in this table.

\*\* While the main feature of the income tax contained in Alaska's HB115 is a calculation equal to 15 percent of federal liability, actual tax revenues exceed 15 percent for three reasons: (1) additional revenue is raised by the 10 percent levy on capital gains income, (2) additional revenue is raised by the \$25 minimum tax, (3) the tax will raise revenue from non-residents whereas the denominator in this calculation is based on the federal tax liability of Alaska residents only. The Alaska income tax revenue estimate in this table is based on the Alaska Department of Revenue's FY2019 estimate of \$643 million for HB115, adjusted to FY2015 levels using a growth rate of 0.81 percent (the average growth rate used by the Department for FY2019 to FY2023). The federal income tax estimate in this table has not been adjusted to account for the fact that Alaskans' federal tax liability would fall under HB115 because of reduced income (from the Permanent Fund Dividend reduction) and increased deductions (from the new tax on personal income). But given the size of the gap between Alaska and the next lowest state (Pennsylvania), making this type of adjustment would not affect the rankings in this table.

\*\*\* This is an unweighted average for the 41 states with broad-based personal income taxes.
